

STRUCTURAL TIMBER ASSOCIATION

Building offsite solutions in timber

As reflected by our rapidly growing Association, with currently over 700 members - STA membership brings genuine commercial benefits through technical insights, new business referrals, networking opportunities, access to unique training schemes and industry recognised, independently audited assessments. Due to our quality, training and technical excellence initiatives - STA members (to meet with their STA Assure audited standard) are required to demonstrate that they work with STA Assure accredited members. Thereby building on the Industry recognised standard "STA Assure – Build with confidence".

STA Assure Membership and Quality Standards Scheme

Mandatory for all our supply chain members including manufacturers, installers & designer engineers - the independently audited scheme has received formal recognition from six of the industry's leading structural warranty and building control bodies.

STA Assure is designed to benefit both clients and members by promoting the differing accreditations and quality standards held by individual STA member companies. This scheme offers reassurances to the construction community that our members meet or even exceed current legislation and regulatory requirements.
